Title: ASB Data Report for 3M Cordova

To: Water Division, US EPA Region 5
77 West Jackson Boulevard
Chicago, IL 60604

From: Lawrence Zintek, Chemist
zintek.lawrence@epa.gov
US EPA Region 5 LSASD Analytical Services Branch

The results reported in this document apply to the samples as received and relate only to the items tested. The data transmitted under this cover memo successfully passed the data review process and applicable Analytical Services Branch (ASB) laboratory Standard Operating Procedures. In accordance with the EPA QA/G-8 *Guidance on Environmental Data Verification and Data Validation*, ASB performs data verification on all the data generated internally. ASB does not perform data validation or quality assessment procedures.

This report was reviewed and the information provided herein accurately represents the analysis performed.

Please contact the analyst with any technical report issues, Amanda Wroble at (312)-353-0375 for sample project concerns, and Robert Snyder at (312)-353-9083 with data transmittal questions. Thank you.

Attached are Results for: 3M Cordova

ANALYSIS CASE NARRATIVE

General Information

Seven water and six soil samples were received 2/25/2022 for per- and polyfluoroalkyl substances (PFAS) analysis. The arbitrary 28 day holding time for this analysis was met. The designated analyst for these samples, Larry Zintek, can be reached at (312) 886-2925.

The preliminary report named 2202010 OSRTI PFC DRAFT Mar 16 22 1601 submitted on March 16, 2022, was a draft and subject to change upon final data verification procedures, this file is near the end of the associated Level 4 data package. The sample analysis results provided in the preliminary results may have changed and are superseded with the information in this final report.

Sample Analysis and Results

Sample preparation and analysis for waters occurred following R5 ASB SOP OM024 Ver. 1 and for soils sample preparation and analysis occurred without an approved Standard Operating Procedure for the expanded list of PFAS analytes. Region 5 Analytical Services Branch standard operating procedure R5 ASB SOP OM022 Ver. 2 and R5 ASB SOP OM024 Ver. 1 served as a guide to conduct the analysis of soils and will data be qualified "Research". Refer to client contact ID#'s 27448, 28304 and Form 13 #27409 for this sample request and is summarized below.

A project planning meeting was held 11/10/21 @ 1:30 pm CT with the client (Jennifer Wilson, ECAD), the OM Group, the LSASD Division Director, the ASB Sample Custodian, and the ASB Sample Coordinator about the PFAS enforcement sampling event for the 3M Cordova project. What was discussed and agreed to is documented in the attachment.

To summarize, the client was made explicitly aware of and agreed to the following:

- 1.) All the samples would exceed the preliminary 28-day hold time and the resulting data will be flagged estimated
- 2.) The expanded PFAS in water SOP (OM024) is not yet published, but the water samples will be prepared and preliminary data provided anyway. However, final, peer-reviewed data cannot be reported until SOP OM024 is published. [see Form 013 #27409]
- 3.) The expanded list PFAS analytes in soil will be reported as 'RESEARCH' as an SOP and validation of these compounds in soil does not yet exist.

The client was notified that:

Project Manager: Jennifer Wilson

Reported:
Apr-28-22 08:37

- 1.) Data reported from sample 'DPT-24-O-3' (LIMS ID 2202010-06) will be flagged estimated ("J") due to sampling containers of unknown origin being used to collect that sample (not the sampling containers that the R5 ASB provided).
- 2.) Analyses for samples 'Equipment Blank' (LIMS ID 2202010-14) and 'Field Blank' (LIMS ID 2202010-15) will be cancelled as incorrect sampling containers and sample volumes were collected in the field.
- 3.) As negotiated with the client, analyses in samples 'DPT-21-MS', 'DPT-21-MSD', 'DPT-21-GW-MS', and 'DPT-21-GW-MSD' (LIMS IDs 2202010-12, -13, 16, and -17) will be cancelled as these chain of custody line items were incorrectly inputted onto the chain of custody; these sampling containers were added to samples 'DPT-21-O-3' (LIMS ID 2202010-03) and 'DPT-21-GW' (LIMS ID 2202010-08) so that matrix QC data could ultimately be provided to the client.

A client (Jennifer Wilson, ECAD) requested the expanded PFAS analysis in water (draft SOP OM024) for samples that are currently arriving at the laboratory (3M Cordova project). SOP OM024 has not been published yet and the corresponding validation IDOC has not been approved yet (both are in second review). The current versions of both ASB Policy #010 (Demonstration of Capability) and #019 (SOPs) state that an IDOC must be approved and a new laboratory test method must have an approved SOP before samples can be analyzed. Getting a brand-new SOP published in Qualtrax is a bit of a lengthy process, so the OM Group would like to be able to start processing these samples while the SOP and corresponding validation IDOC make their way through the approval process. No affected samples will be reported (final, peer-reviewed data) until both the SOP and validation IDOC are officially published/approved.

All PFAS field samples were prepared, analyzed and reported in duplicate due to erratic PFAS contamination present in consumables required to perform this procedure. All Quality Control data, including Duplicate results, should be evaluated by the user before any decision about the quality of the data and use.

Through extensive testing of several brands and part numbers of various consumables required for PFAS sample collection, preparation, and analysis for this analysis, it has been determined that obtaining consistently trace-level, PFAS-free products is unlikely. However, the sporadic PFAS contamination currently observed is predominately low-level (at or near the reporting limit) and only appears to occur in <2% of consumables tested. Requiring duplicate sample collection, preparation, and analysis provides the needed assurance that the PFAS values reported here are both precise and accurate. The replicate field sample data has to be evaluated by the user to identify biased high or false positive results.

However, caution should still be taken by data users when evaluating low-level PFAS results in terms of project decision making. Data users should also consider that replicate PFAS samples are co-located and data variability between replicates may occur based on the co-located nature of replicate PFAS sampling. In the report, field sample replicates are indicated using the labels "RE1" (e.g. the replicate preparations/analyses for field sample 2202010-03 will be labeled 2202010-03RE1).

Project: 3M Cordova
Project Number: [none]
Project Manager: Jennifer Wilson

Reported:
Apr-28-22 08:37

PFPrA elutes early, only has one MRM transition and does not have an isotope to evaluate recovery or peak shape to compare to the native. Since this is the case it is very difficult to identify anything that is co-eluting with PFPrA and make a proper evaluation, please be aware.

Since PFAS contamination has become an issue with this analysis all field samples were taken in duplicates. The complete data package and replicates need to be evaluated by the user in order to make sound conclusions. NO DATA SHOULD BE USED BELOW THE REPORTING LIMIT, this method was only evaluated or tested to the reporting limit. The QC samples report data below the reporting limit for QC purposes, any data below the reporting limit should not be used.

The data reported herein meets the requirements referenced in the SOP(s) used for analysis and laboratory specifications except for those stated in the QC section below.

Quality Control

All quality control audits not mentioned below were within the analyst's professional judgement evaluation and SOP criteria and did not result in qualification of the data. See the report for detailed QC results.

Calibration Curve

The calibration curves used for all PFHpA data contained a very biased high concentration at Level 2, most likely caused by contamination of PFHpA in that vial/cap. A point inside the calibration curve can't be excluded, so both the Level 1 and 2 points were excluded. The Level 1 point when evaluated against the abbreviated curve was well within tolerance. Therefore, the reporting limit was raised to 40 ng/L for water. According to the analyst's judgment, there were no detects at or above the original reporting limit of 10 ng/L in the water site samples for PFHpA. Any detects below a 100 ng/kg for soil were reported but qualified estimated, "J" and of course "Research" since no approved SOP exists at this time.

Qualitative Identification

For any analyte, when the ion ratio limit of $\pm 30\%$ is exceeded, the affected data are qualified 'I'.

Batch B22C009

Surrogate Recovery

Sample B22C009-BLK1 was slightly biased low for M5PFHxA, M8PFOA, M9PFNA, M8PFOS, M6PFDA,

M7PFUnA, MPFDoA, M4:2FTS, M6:2FTS, M8:2FTS, M3PFBS, M4PFHpA, M2PFTreA and M8PFOSA. The data were qualified appropriately in affected sample.

Blank Spike/Blank Spike Duplicate

B22C009-BS1 was slightly biased low for PFDoA, PFUnA, PFDA, PFOS, PFNA, PFOA, PFHxS, PFHpA, PFHxA, PFBS and PFPeA. No qualifications were required.

Relative Percent Difference (RPD)

The RPD failed in B22C009-BSD1 for the following analytes due to low bias in B22C009-BS1: PFTriA, PFDoA, PFUnA, PFDA, PFOS, PFNA, PFOA, PFHxS, PFHpA, PFHxA, PFBS, PFPeA, PFBA and PFTreA. No qualifications were required.

The RPD was not evaluated between the sample the re-extract. The "Q" flags associated with RPD failures are not evaluated when the native sample and lab duplicate are both below the RL. The "Q" issued in these cases are an automated entry of the LIMS system and should be ignored. PFAS contamination may occur affecting the RPD. All data should be evaluated by the user before use.

Method Reporting Limit Check(s) (MRL)

PFOS was biased high in B22C009-MRL2. No qualifications were required.

Method Blank(s)

B22C009-BLK2 contained PFOS at 17.7 ng/L. The reporting limit was raised to 13 ng/L for sample 2202010-09RE1 and 15 ng/L for sample 2202010-08 (These are nominal concentrations.), just above detection of PFOS in those samples.

Batch B22C010

Method Blank(s)

B22C010-BLK1 contained PFEESA at 23.7 ng/kg and B22C010-BLK2 contained PFEESA at 25.3 ng/kg. The reporting limit was raised. B22C010-BLK2 contained HQ-115 at 17.3 ng/kg, sample 2202010-06RE1 for HQ-115 was qualified estimated, "J" since it was within three times the blank contamination.

Reported:
Apr-28-22 08:37

Surrogate Recovery

Samples 2202010-01, -03, -03RE1, -04 and -05 and B22C010-DUP1, -MS1 and -MSD1 were biased low for D7-N-MeFOSE and D9-N-EtFOSE. Samples 2202010-01RE1, -02, -02RE1 and -06RE1 were biased low for D7-N-MeFOSE, D9-N-EtFOSE and M2PFTreA. Sample 2202010-04RE1 was biased low for D9-N-EtFOSE. Sample 2202010-05RE1 was biased low for D7-N-MeFOSE and D9-N-EtFOSE and biased high for MPFBA and M8:2FTS. Sample 2202010-06 was biased low for D7-N-MeFOSE, D9-N-EtFOSE and M2PFTreA and biased high for MPFBA. Data are appropriately qualified

The data were qualified appropriately in affected samples.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

B22C010-MS1 and -MSD1 were biased low for N-MeFOSE, N-EtFOSE and PFMPA. Data are appropriately qualified.

Method Reporting Limit Check(s)

B22C010-MRL1 was biased low for PFDS, PFNS, PFHxA, PFPeS, FOSA, 4:2FTS, N-MeFOSAA, 5:3 FTCA, PFDoS, N-MeFOSA, N-MeFOSE, ADONA, 11Cl-PF3OUds, NFDHA, 3:3 FTCA and FHUEA. B22C010-MRL2 was biased high for PFEESA. No data qualification was required.

Relative Percent Difference (RPD)

The RPD failed for PFMPA for B22C010-MSD1, data are qualified correctly.

The RPD was not evaluated between the sample the re-extract. The "Q" flags associated with RPD failures are not evaluated when the native sample and lab duplicate are both below the RL. The "Q" issued in these cases are an automated entry of the LIMS system and should be ignored. PFAS contamination may occur affecting the RPD. All data should be evaluated by the user before use.

Notes and Definitions

Research	Samples analyzed while the method is under development and contain results of unknown quality. No SOP in place at time of data release. Client was notified and accepted the terms as stated.
L	The identification of the analyte is acceptable; the reported value may be biased low. The actual value is expected to be greater than the reported value.
K	The identification of the analyte is acceptable; the reported value may be biased high. The actual value is expected to be less than the reported value.
J	The identification of the analyte is acceptable; the reported value is an estimate.
I	Ion ratio criteria is not met for this analyte
U	Not Detected
NR	Not Reported
Q	QC limit Exceeded
